Subject: EZ Street

Kelly,

The Yolo County Public Works Roads Division has been using EZ Street since the Winter of 2014 and couldn't be happier with the results. Prior to being introduced to EZ Street, Yolo County was using similar products that did not have the same characteristics as the EZ Street product. Other products did not adhere to thinner potholes like EZ Street and did not remain workable after a period of time after being stockpiled in the County yard. We have several areas throughout the County where we would not have used previous products because it would simply kick out of the pothole due to the hole being too thin or the material did not have enough binder to make it adhere to the road surface. We can truly say that EZ Street can be used in potholes from less than an inch deep to several inches deep, we have also repaired shoulders with it. On days of inclement weather or on warm weather days when we encounter equipment failure and cannot pave with hot asphalt, we simply load our patch truck with EZ Street and send the crew out to perform pothole repairs. This allows us to remain productive and continue to provide exemplary customer service to the residents we serve. I would highly recommend EZ Street to any agency or contractor that performs pothole repair and utility work...you will NOT be disappointed.

Thank you,

Ron Hayes
Road Division Supervisor
Yolo County Planning, Public Works & Environmental Services

GUARANTEED PERMANENT • WORKS IN WATER AND ALL WEATHER
