

FAQ's

How do I apply EZ Street asphalt to a pothole filled with water?

Just throw EZ Street asphalt directly into the water filled hole. EZ Street asphalt will displace the water. Then, compact the EZ Street asphalt with a shovel or car tire. Leave a slight crown on the patch because it will compact a little more as traffic goes over it.

How long does EZ Street asphalt stay workable in a stockpile?

EZ Street asphalt is guaranteed to stay workable in a stockpile for at least 6 months in a 50-ton pile stacked 6' high. But we've had smaller stockpiles last over a year outside. If you leave the stockpile undisturbed for a long period of time, a protective crust may form over the pile. This is a built-in mechanism to prevent premature hardening of your stockpile. If this happens, simply have your loader "fluff up" the material prior to loading the truck. This will rejuvenate the EZ Street asphalt.

What's so special about the EZ Street bag?

The EZ Street bag is made of durable poly-vinyl that helps prevent breakage a first in the industry. EZ Street asphalt lasts for at least a year in the bag.

How long after applying EZ Street asphalt does traffic have to be diverted?

EZ Street asphalt is ready for traffic the instant you throw it in the hole. In fact, many EZ Street users keep bags in their trucks so when they come across a pothole they can just throw it in the hole and let traffic compact it.

Does EZ Street get harder to work with as the temperature gets colder?

All EZ Street mixes are custom designed for a region's broader climatic conditions. So, if your geographic region is experiencing its normal winter temperatures, then EZ Street asphalt should be designed to work relatively easy in that environment. Generally though, the colder it gets, the stiffer the material becomes to work with.

USAGE GUIDE

50 lb Bags	Bulk EZ Street
4.5 ft ²	1 ton = 20 square yards 2 tons = 40 square yards 10 tons = 200 square yards <small>(Approximately 100 lbs per square yard) (Measurements based on 1" depth)</small>
9 ft ²	
13.5 ft ²	
22.5 ft ²

GENERAL INFORMATION

EZ Street is a ready to use, high performance, polymer-modified, cold asphalt capable of providing a cost effective, simple and permanent solution to a variety of applications. EZ Street asphalt has an extended stockpile life while retaining excellent workability. EZ Street asphalt requires no tack coat, can be used to patch both asphalt and concrete surfaces, and can even be applied in water! EZ Street asphalt can be opened immediately to traffic making it perfect for those inevitable “throw and go” situations. If proper installation techniques are utilized, EZ Street applications should have an equivalent or extended life expectancy in comparison to hot mix asphalt. Proper installation is the key to the longevity of any paving application and following is a brief guide to help insure the maximum performance for your EZ Street material.

Available in Bulk, 50 lb Bags & Bulk Sacks!

INSTALLATION GUIDE

EZ Street asphalt will perform best and achieve maximum longevity if the following installation procedures are followed.

Sweep

Sweep out area to be patched. Make sure to remove all loose debris, broken pieces of pavement, and dust.

Fill

Fill pothole with EZ Street asphalt. For holes deeper than 4", compact material in 2" layers.

Compact

Compact the EZ Street asphalt with a shovel, tamper or vehicle to just over the level of the existing pavement.

THE BASICS

The Design

Carefully selected and graded, approved raw materials (coarse and fine aggregate), are married up with the liquid portion of the mix (Asphalt cement, diluents, and EZ Street Polymers). Consideration is given to the climatic conditions of where the mix will be utilized, and for what type of application.

So, there are a multitude of designs for a multitude of geographic regions and applications. Consistent with every design is the proper proportioning of raw materials, so that once the product is in service, it will fully function in its intended application.

The Elements

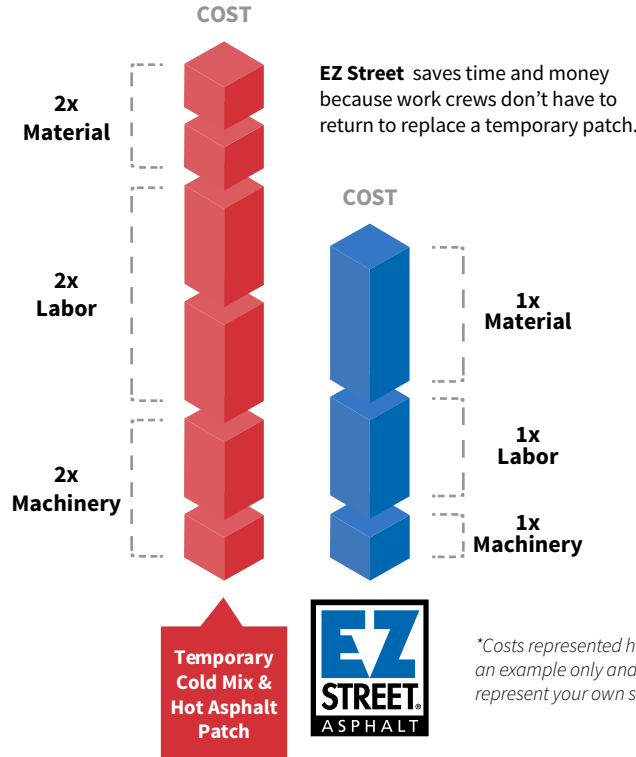

Over time, the mixes' exposure to the elements (sun, air) will help “cure” the mix to its fullest potential, leaving you with a permanent repair. How long will this take? That depends – the more compaction, and the longer the repair is exposed to the elements, the better the repair becomes. As a rule of thumb, all EZ Street patches are ready for traffic immediately after installation.

Compaction

Once EZ Street leaves its bulk or bag form and is applied in its intended application, it's subject to compaction. First, there is the initial compaction of the installation, and that might be accomplished through mechanical or non-mechanical means such as a plate or roller compactor, or hand tamper, respectively. Then, there is the repeated secondary compaction (car and truck tires). Here is where the “design” meets the road, so to speak. Repeated compaction of the EZ Street results in a continued tightening of the mix – where the particles properly interlock, resulting in a permanent mix.
