

EZ Street Asphalt, Invigorating Colorado

When people in Colorado think of cold asphalt, the first thing that comes to mind is EZ Street Asphalt. A high performance, permanent cold asphalt product that has been produced and sold in Colorado since 2007. With about 105 freeze-thaw cycles per year, Colorado is not one to shy away from those pesky potholes, the ones that you rarely see coming and drive over, causing a thump in your car and potentially a punctured tire or bent rim. Thankfully, there is EZ Street Asphalt, a product that requires minimal effort to use, and permanently fixes potholes, even in water!

Produced by Colorado Asphalt Services in the Denver Metro area, and Elam Construction on the western slope, local municipalities have convenient locations where they can pick it up, in bulk or bags. Myra Thorn-

ton, CASI's EZ Street Sales Manager states, "It's almost like an obstacle course on some roads, however, we have such a great customer base that is using EZ Street to patch, I can rest assured that those holes will remain intact after placing EZ Street Asphalt in them." Over the years EZ Street has enjoyed a successful relationship with the Colorado Asphalt Pavement Association and remain active participants in their events. Tom Francione, VP of Sales and Business Development proclaims, "When we enter markets, we go all in. Our product is produced locally, with local raw materials, and the relationships I've formed with various Public Works Departments over the years, has demonstrated itself in their loyalty to EZ Street.

Striving for a culture of excellence, our customers in Colorado are what drives us to keep things exciting, and building genuine relationships with them." EZ Street Asphalt, Always Workable, Always Stays in the Hole, Always Saves Money. Showing Potholes Who's Boss! www.ezstreetasphalt.com.

New Lab & Testing Equipment from Kumar & Associates

Kumar and Associates, Inc. (K+A) recently acquired a Pine Test Equipment Inc.'s G2 Superpave Gyrotory Compactor to better serve our clients with any road construction projects.

Pine Test Equipment Inc.'s G2 Superpave Gyrotory Compactor is designed to compact asphalt specimens of multiple design mixes with less lead time. Pine has 50 years of design innovation to set the standard in asphalt testing. K+A is able to quickly switch from 100mm mold to 150mm mold without losing any time for machine setup. With more durable design and 24/7 technical support from Pine Test Equipment, if any mechanical errors occur, they can be resolved and repaired quicker to reduce downtime. This new equipment and process allows for quicker turnaround on any of K+A's asphalt testing.

Integrity. It's How We Do Business.

Count on us for:
Early, often, and thorough **communication**
Quick, accurate, **detailed bids**
Excellent **craftsmanship**
